PROFESSIONAL EXPERIENCE

NORC at the University of Chicago

Research Methodologist II

Research Methodologist I

Chicago, IL

January 2023 – March 2025

November 2020 – December 2022

Data Quality & Validation

- Developed and documented multi-construct psychometric scale scores in for two large-scale veteran health surveys (80+ items, 18,000+ respondents each), with methodology validated by senior methodologists and outputs used in client reports, publications, and presentations
- Owned end-to-end distress identification protocol for the Wounded Warrior Project (WWP) Annual Warrior Survey, combining SAS-based text scanning of open-ended responses for trigger language with closed-ended item flagging to identify veterans indicating distress or need for services across 18,000+ survey responses
- Collaborated with WWP client team to define and refine distress identification criteria, translating clinical and operational requirements into reproducible SAS logic; delivered daily distress case lists via secure file transfer enabling timely staff outreach to connect veterans in crisis with support services
- Automated data validation for large-scale surveys in SAS, encoding skip logic, range checks, and straight-lining/speeder detection; reviewed and QC'd codebooks before client handoff

Sampling Design, Weighting & Research Methods

- Executed end-to-end survey sampling and weighting pipelines in SAS and R for 1-2 client studies per week using NORC's AmeriSpeak probability panel, including sample selection, base weight construction, non-response adjustment, and iterative raking to census benchmarks; for studies incorporating opt-in samples, applied small area modeling and machine learning-informed bias correction to produce calibrated combined weights
- Handled progressively more complex sample designs over time, by the end, roughly 3 in 4 surveys involved oversamples, hard-to-reach populations, or combined probability/non-probability designs, consulting with senior statisticians on the most complex tasks while independently managing standard designs and QC-ing the work of junior analysts
- Developed a sampling approach to identify a population that existing panel variables couldn't cleanly isolate due to outdated or incomplete household roster data; approach was novel enough that leadership asked me to present it across the AmeriStats, Panel Operation, and Business Development teams, and a panel infrastructure change I proposed from the exercise was subsequently adopted, eliminating a manual file merge step from the standard parent-sampling workflow
- Grew into one of two technical leads for AmeriSpeak's ad hoc feasibility function, managing 4-5 panel queries per week to assess whether prospective client studies were achievable as specified or needed modifications before proceeding to sampling; escalated complex requests to senior statisticians and client services leads as needed
- Wrote and maintained SAS scripts and documentation for the feasibility workflow, including a dedicated set of scripts and documentation for teen studies, surveys targeting minors requiring additional consent and specific considerations
- Trained approximately 10 incoming statisticians on panel structure, population identification logic, and feasibility workflows

Field Research & Data Collection

- Recruited participants and managed scheduling, communications, and incentive distribution for a series of focus groups designed to evaluate recruitment materials for the ASCEND veteran suicide prevention survey; led focus groups across African American, Hispanic, AAPI/Native American, and young adult veteran groups (5-6 participants each)
- During early sessions, identified that non-veterans were participating in the groups, escalating the issue to senior methodologists; a military-knowledge screening question was subsequently adopted for all remaining sessions to ensure participant integrity
- Wrote the focus group sections of the methodology report; findings directly informed revisions to recruitment postcards and letters before materials were finalized for the full survey launch
- Traveled to Nigeria and Liberia to train 30+ enumerators across two 6-day field trainings on protocol for interviewing child domestic workers, a vulnerable population, covering survey content, eligibility criteria, consent

and assent procedures, child safety and distress protocols, and real-time data quality monitoring; led the Liberia training independently, adapting curriculum and grading daily quizzes

The World Bank

Washington, DC

Research Assistant | Poverty and Inequality Unit (DECPI)

April 2014 – June 2015

- Deployed to Malawi to conduct real-time data quality monitoring for an education impact evaluation of 2,000+ children across 199 community-based childcare centers, writing Stata scripts to catch incoming data errors and reconciling paper surveys against prior-wave datasets before panel finalization

Research Assistant | Trade and International Integration Unit (DECTI)

August 2015 – October 2017

- Cleaned, analyzed, and documented household survey datasets from 20+ countries across Africa, Asia, and Latin America in Stata, maintaining reproducible records to support PI review and onboard incoming team members

PROJECTS

Flu Shot Learning | DrivenData Competition | Python | [GitHub](#)

- Built a two-target binary classification model to predict H1N1 and seasonal flu vaccination uptake across 26,707 survey respondents from behavioral, demographic, and opinion features; trained separate LightGBM models per target with independent class-imbalance handling, achieving 85% predictive accuracy averaged across both targets, ranking competitively against top submissions in the DrivenData competition
- Engineered six features grounded in EDA findings, including a non-response indicator exploiting MNAR signal (opinion missingness predicted 10pp lower vaccination rates); validated each feature against held-out AUC before including in the final feature set
- Translated model findings into prioritized resource allocation recommendations, identifying physician recommendations as the dominant predictor over demographic and behavioral factors

Education Under Fire: Conflict Exposure & Educational Attainment in Northern Nigeria | Undergraduate Honors Thesis | [GitHub](#)

- Estimated the causal effect of armed conflict on years of schooling using a difference-in-differences framework, merging DHS household microdata with geocoded ACLED conflict events at the LGA level; Python/R pipeline

EDUCATION

Harris School of Public Policy, University of Chicago

Chicago, IL

Master of Public Policy (MPP)

June 2020

- Certificate in Survey Methodology and Research Methods

University of Maryland, College Park

College Park, MD

BA, Economics (with Honors) | BS, Mathematics

May 2013

- Economics Honors Thesis: *Education Under Fire: Conflict Exposure & Educational Attainment in Northern Nigeria*

ADDITIONAL WORK EXPERIENCE

- National Youth Service Corps (NYSC) | National Assembly of Nigeria | Abuja, Nigeria | July 2025 – July 2026
- Research Associate | Innovations for Poverty Action | Washington, DC | January 2018 – August 2018
